

ERRATA

A Multidimensional Poverty Index for Latin America

Maria Emma Santos, Pablo Villatoro, Xavier Mancero and Pascual Gerstenfeld

OPHI Working Paper 79

<http://www.ophi.org.uk/a-multidimensional-poverty-index-for-latin-america/>

Page 5 (the equation):

$$\text{Read: } MPI = M_0 = H \times A = \frac{1}{n} \sum_{i=1}^n \sum_{j=1}^d w_j g_{ij}^0(k)$$

Page 8 (Table 2: MPI-AL: Dimensions, Deprivation Indicators and Weights):

Read:

Social Protection	Households experiencing at least one of the following characteristics: <ul style="list-style-type: none">- no member has some form of contributory health insurance;- no member is contributing to a social security system and no member is receiving a pension or retirement income
-------------------	--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

Table of Supplementary Data:

The Table of Supplementary Data published in January 2015 has been replaced by one with two corrections, which are as follows. The published results on M_0 , H and A (and their corresponding upper and lower bounds) for Dominican Republic 2006 in the Table were incorrect and not the ones used in the analysis of the paper. These have been replaced by the correct ones and actually used in the analysis of the paper. Results for the rest of the countries have been marginally corrected due to a small correction in the employment indicator. Changes are in general no more than 0.002, except for an increment of 0.005 in H in Argentina 2002, an increment of 0.005 in the censored headcount ratio of people per room in Bolivia 2003, of 0.004 in the censored headcount ratio of monetary resources in Argentina 2005, a decrement of 0.003 in the censored headcount ratio of child attendance to school in Bolivia 2003 and 2012, an increment of 0.003 in the censored headcount ratio in employment in Bolivia 2003, and an increment of 0.003 in the censored headcount ratio of social protection in Argentina 2003.
