
The case for multidimensional approach to poverty measurement

46th Session of the United Nations Statistics Commission

Pali Lehohla
Statistician-General South Africa

2nd February 2015

Outline

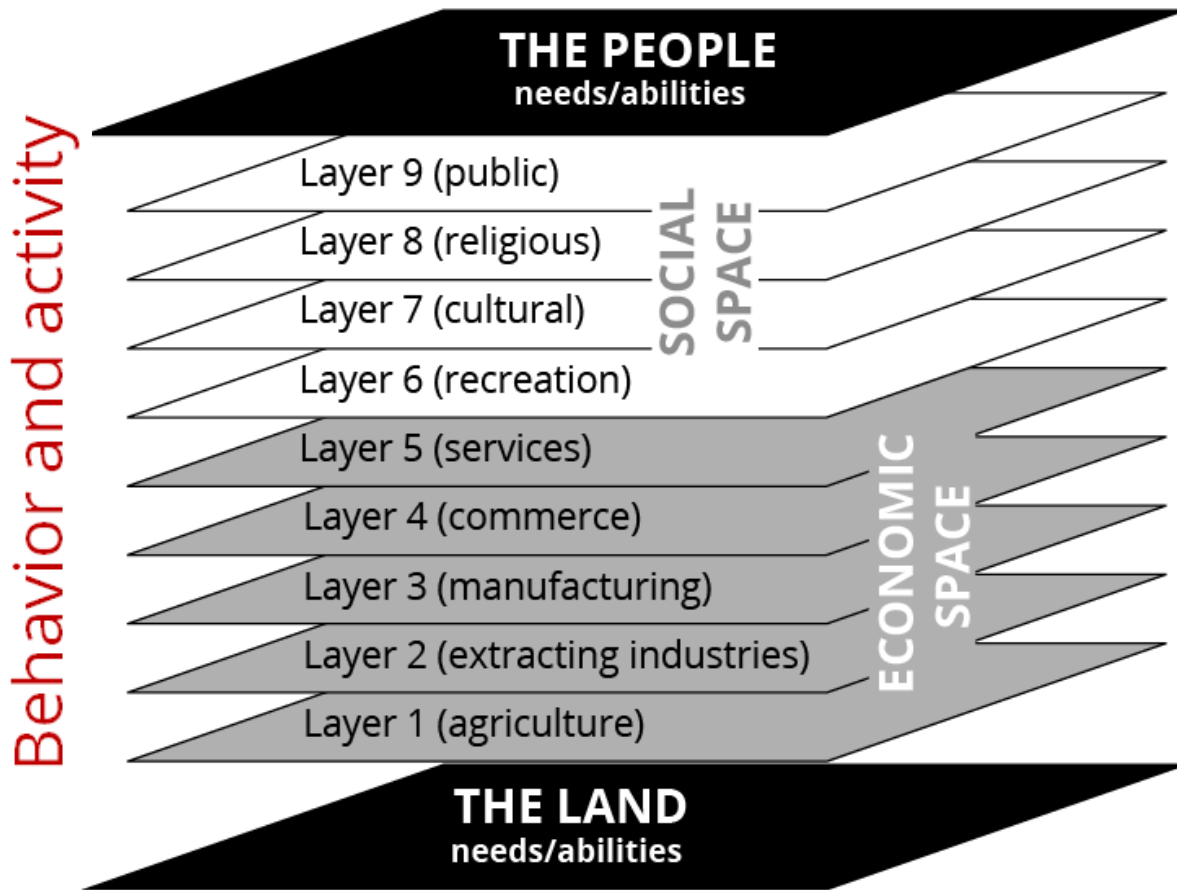

Human activities in space

Intersection of natural capital economy and society

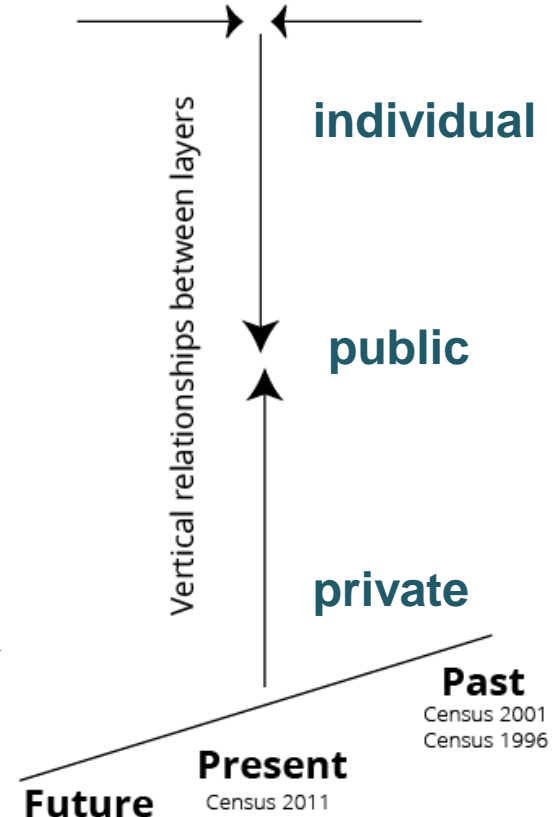

- **Human Settlements and geographical dimension of multidimensionality**
- **Education and socio-economic determinants of performance including spatial configuration**
- **Framing Poverty Measurement in South Africa**

Human activities in space

BIG DATA WORLD

DYNAMICS
Horizontal relationships within layers

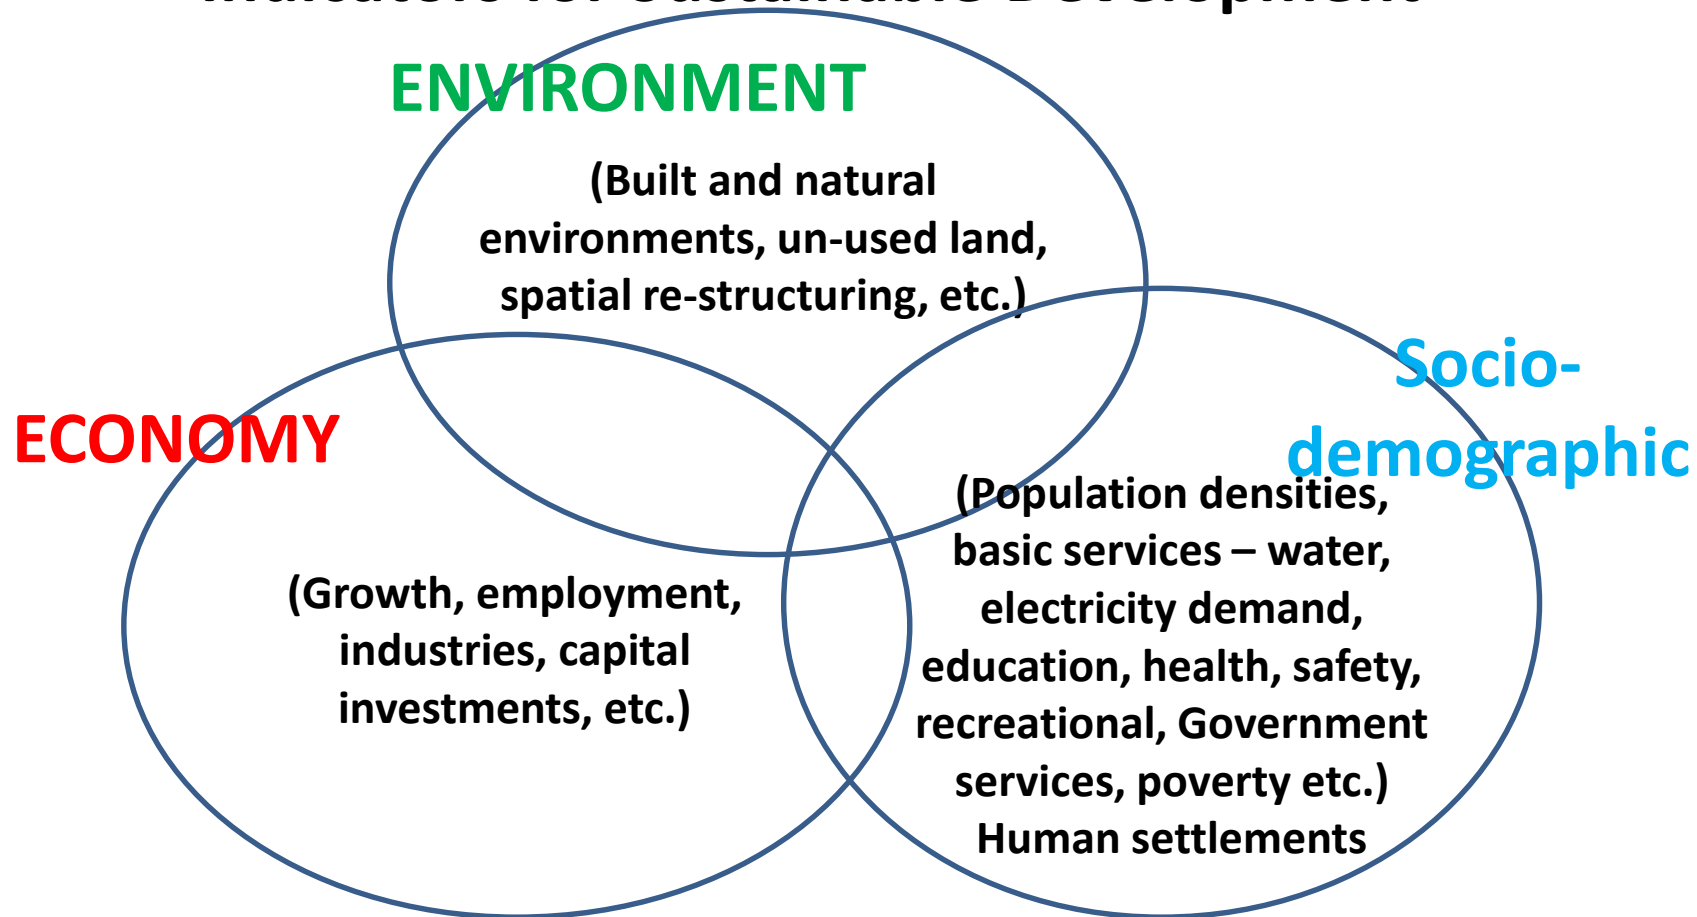

geography = over space and place

data = template of evidence

Indicators for Sustainable Development

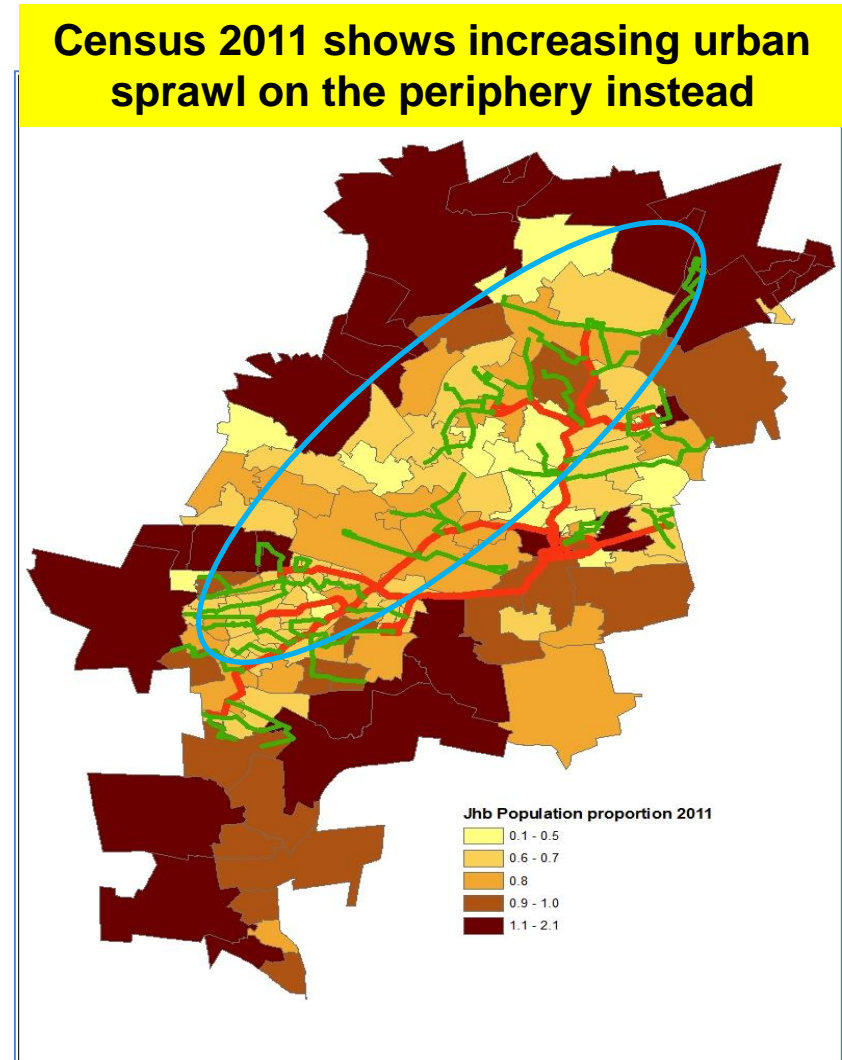

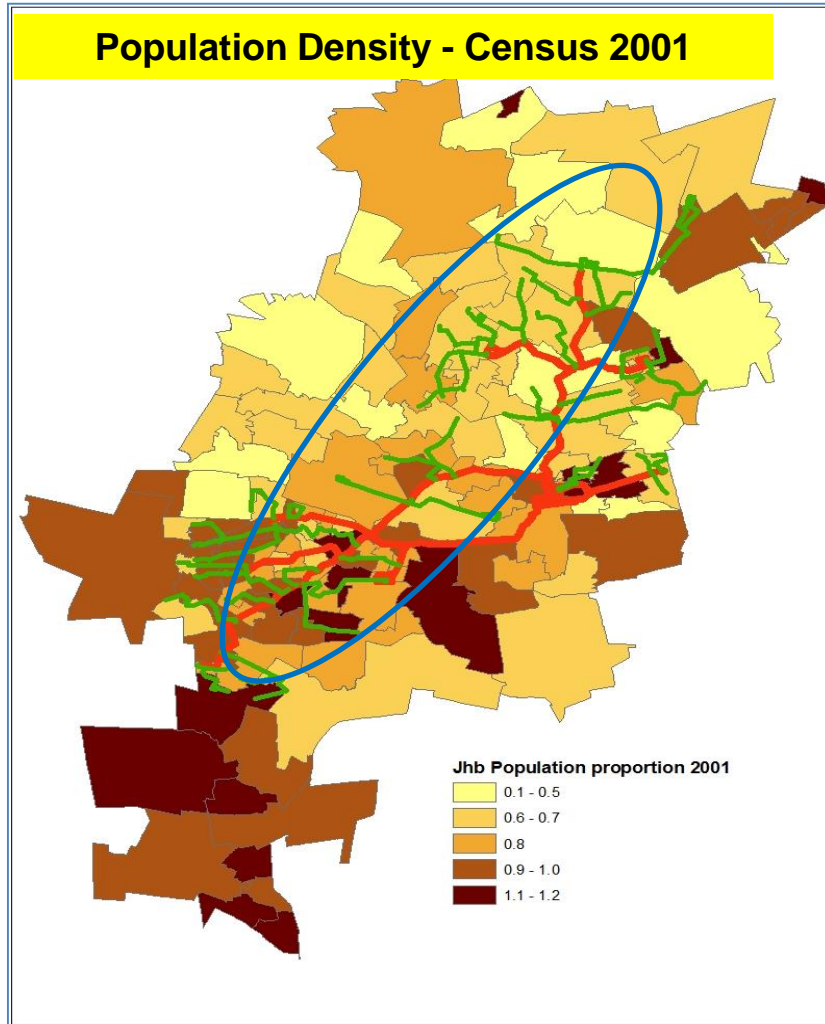

Intersection of natural capital Economy and Society

- Requires measuring 'bottom-up' within the place/ neighbourhood/ community/ wards
- Requires strong institutions (local municipalities, districts, cities & provinces)

Geography as a dimension: Human Settlements policy

The 2011 settlement patterns illustrate that policy intentions and public action are at variance with densification on the margins

Spatio-Cultural and Temporal Dimensions of Measurement

Education and socio-economic determinants of performance including spatial configuration

Bomfenbrenner (1979): defined four contributing groups to school performance

- Macro Level – Education Department, OBE, CAPS
- Meso Level – School funding, Teachers qualification,
- Micro Level – Individual Students, attendance, homework
- Exo Level – Socio- Economic Factors in the Community/ School feeder areas
 - Levels of Poverty
 - Level of Employment
 - Access to Basic Services
 - Household goods

A useful definition of Socio economic status (SES) is:

“Relative position of a family or individual on a hierarchal social structure based on their access to, or control over wealth, prestige and power”

Willms 2004.

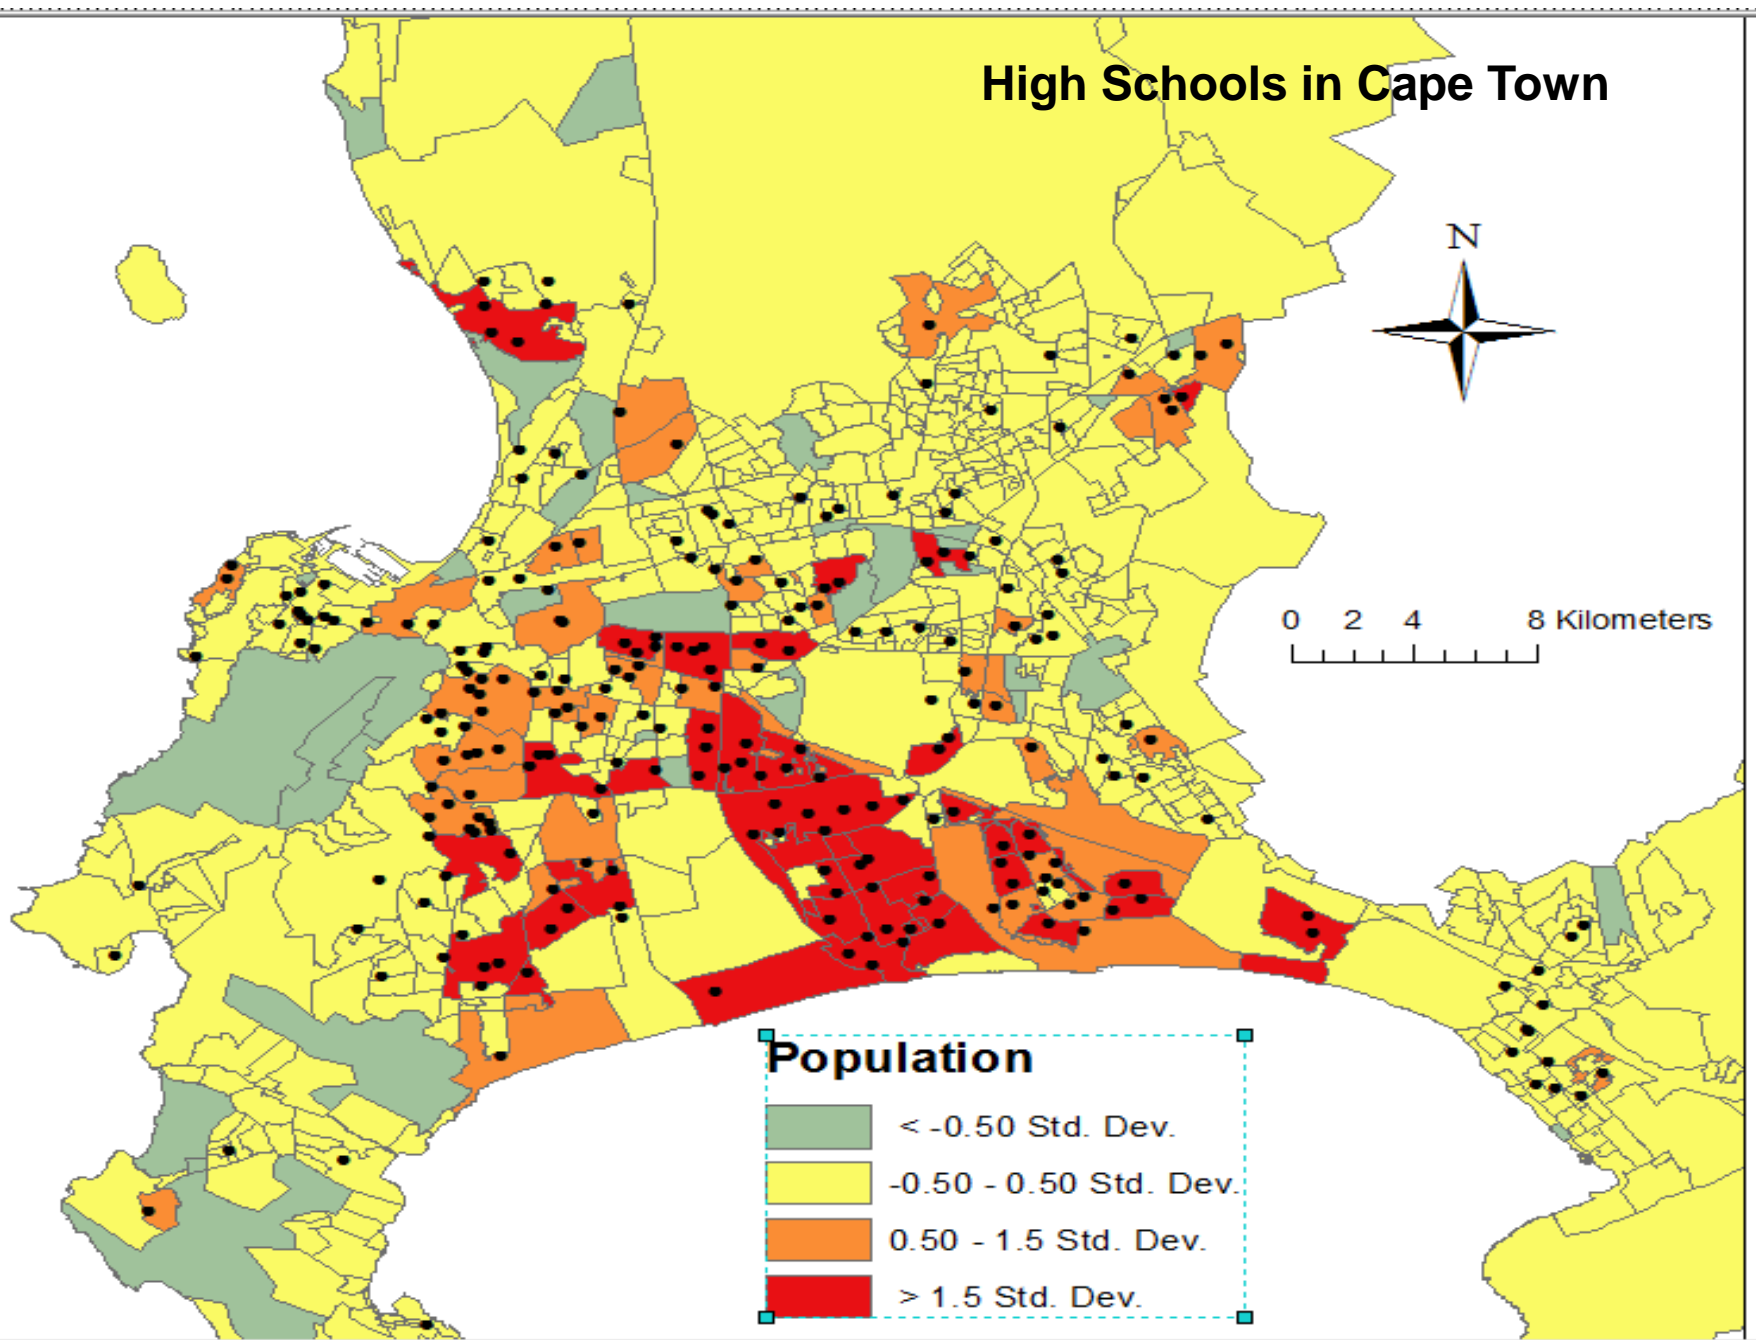

High Schools in Cape Town

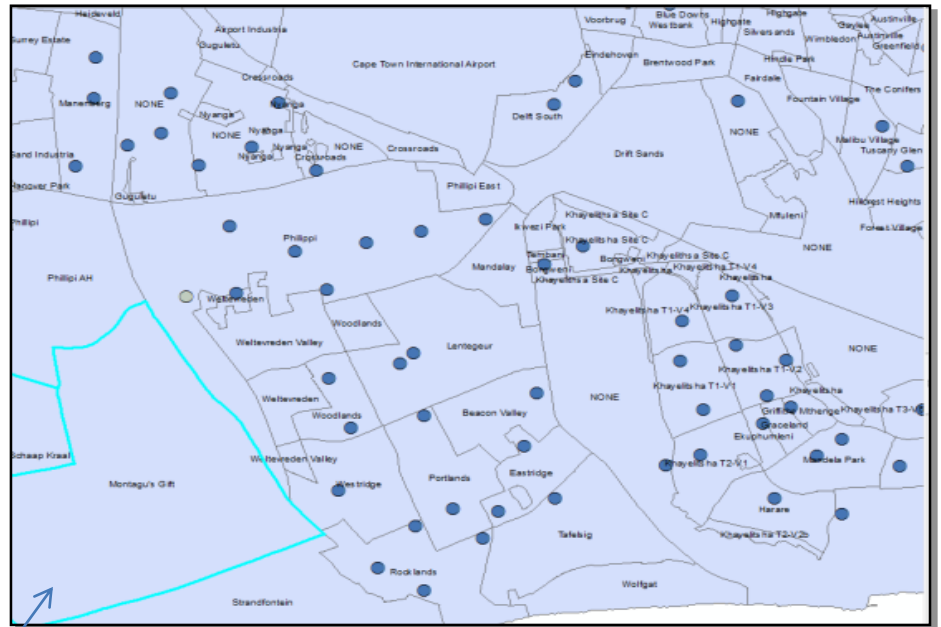

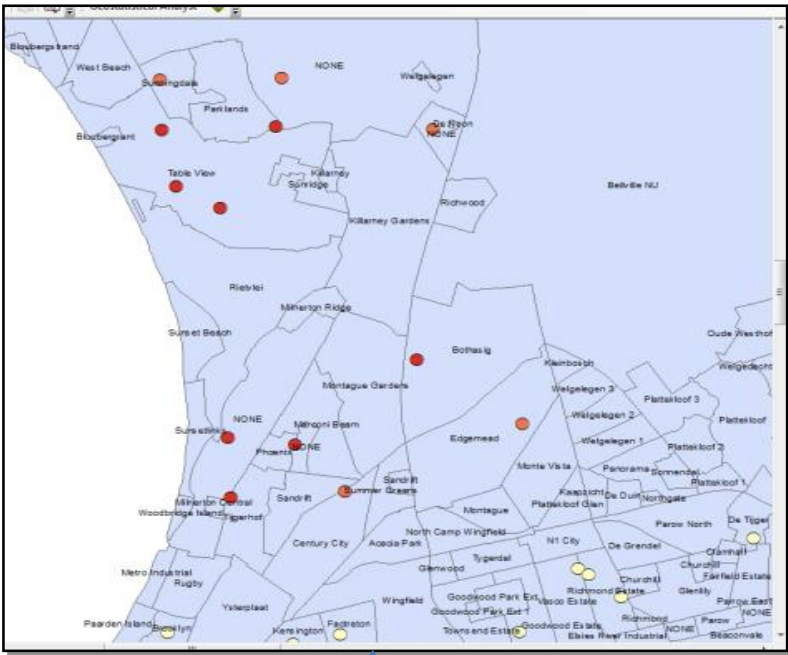

0 2 4 8 Kilometers

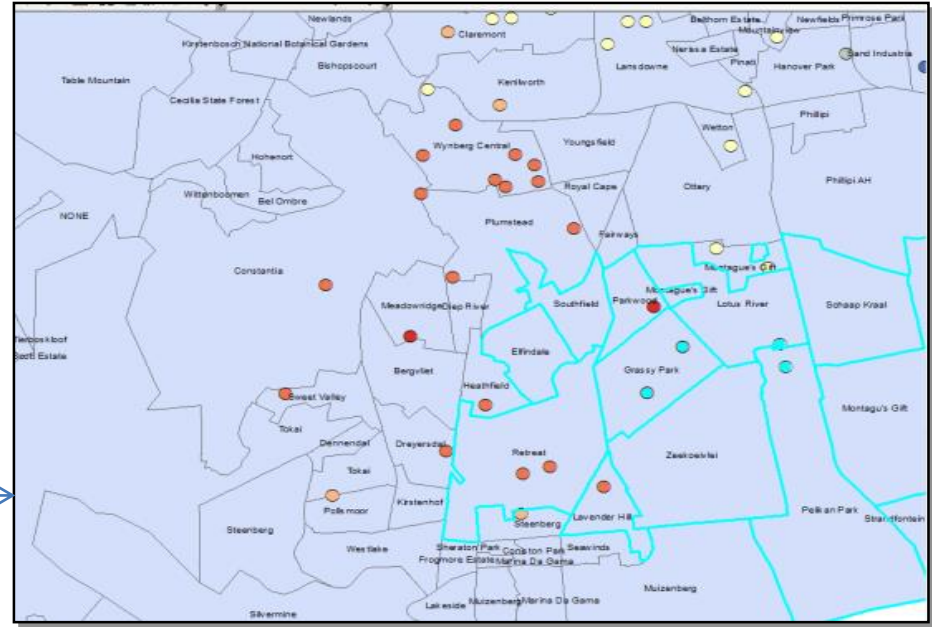

Population

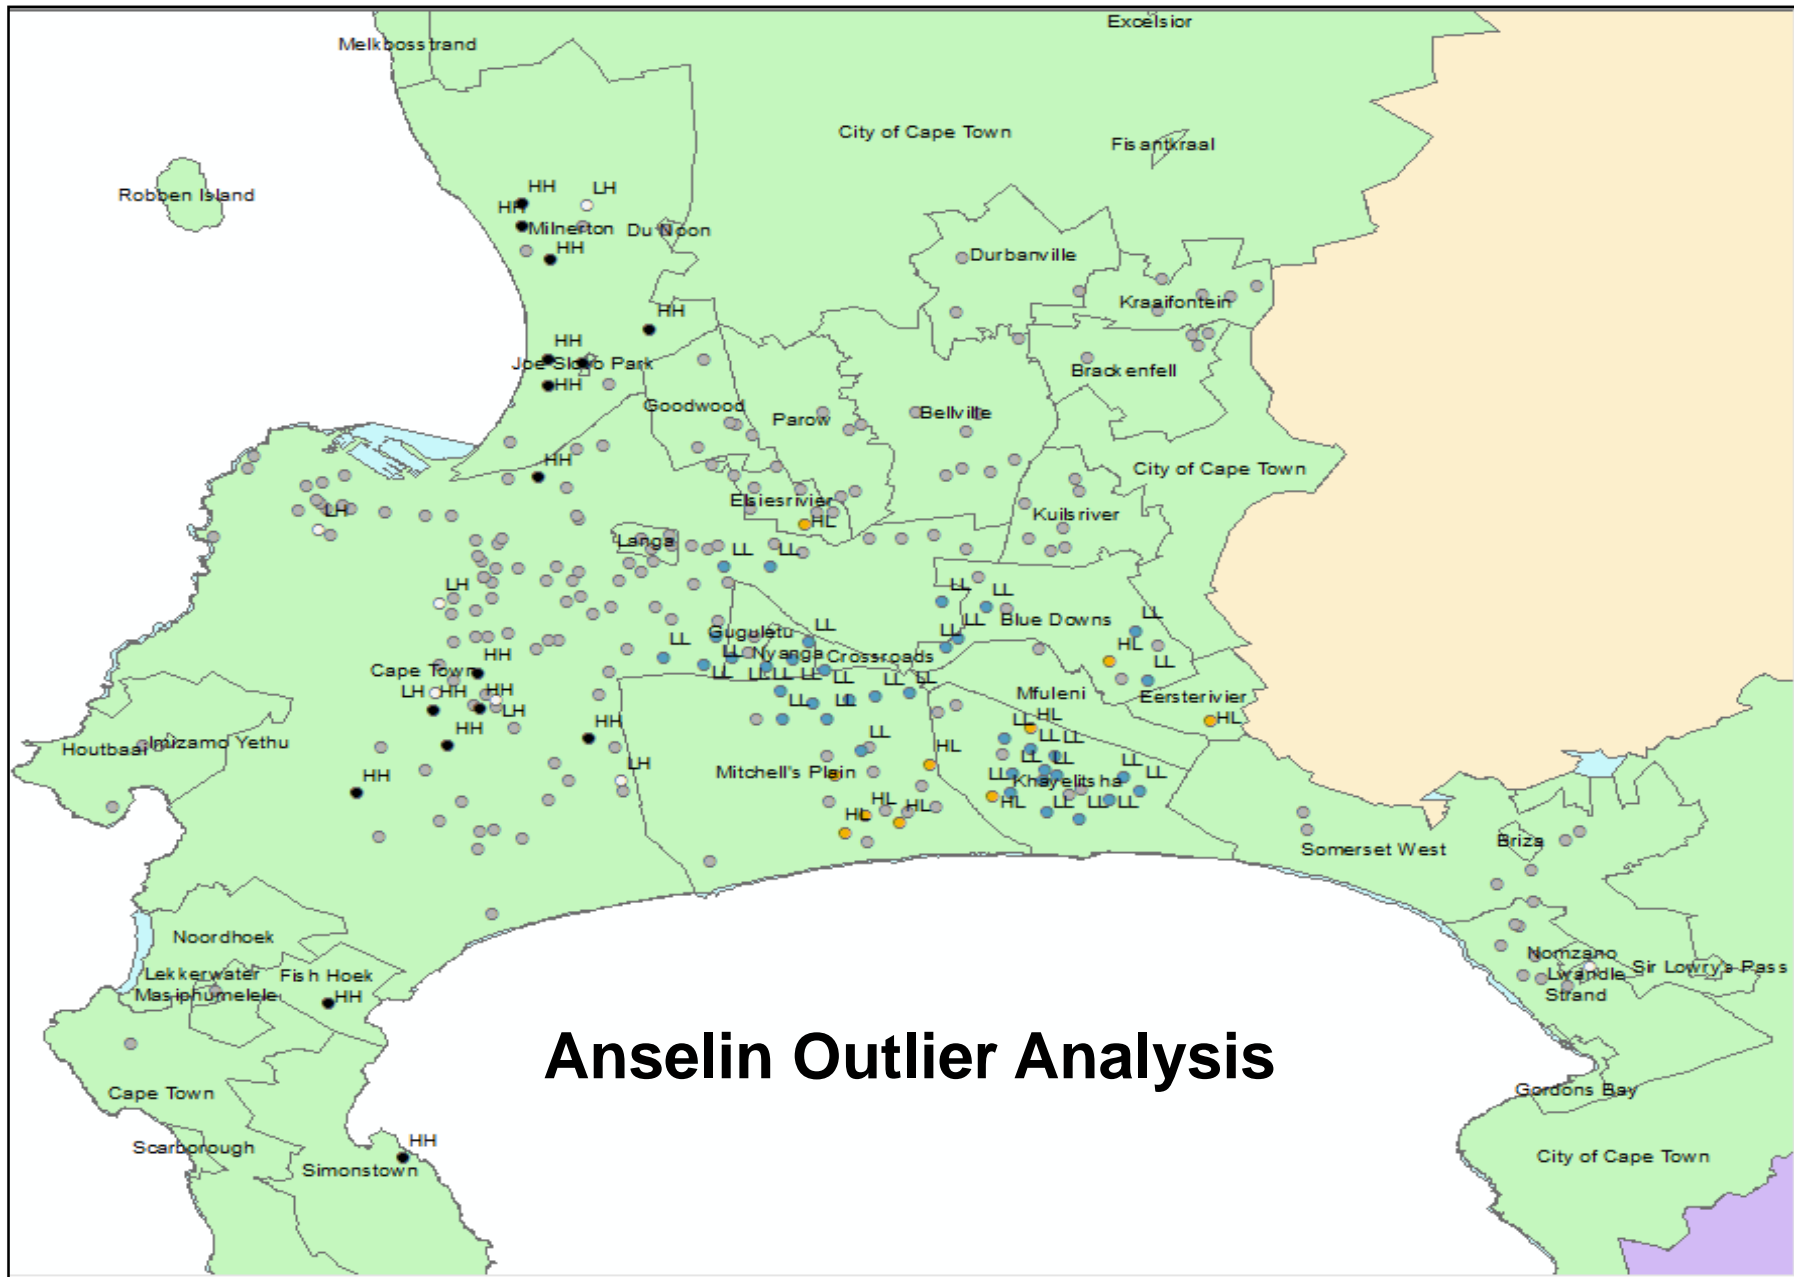

- < -0.50 Std. Dev.
- 0.50 - 0.50 Std. Dev.
- 0.50 - 1.5 Std. Dev.
- > 1.5 Std. Dev.

geographical weighting for policy relevance

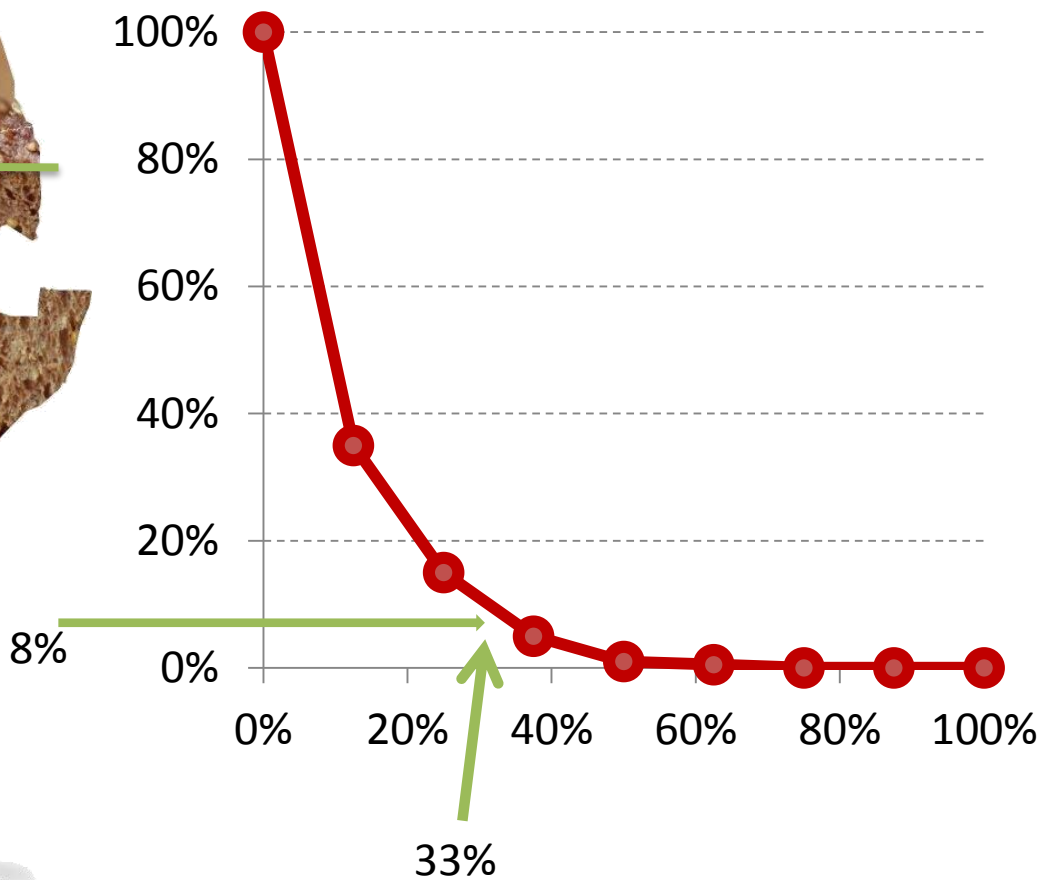

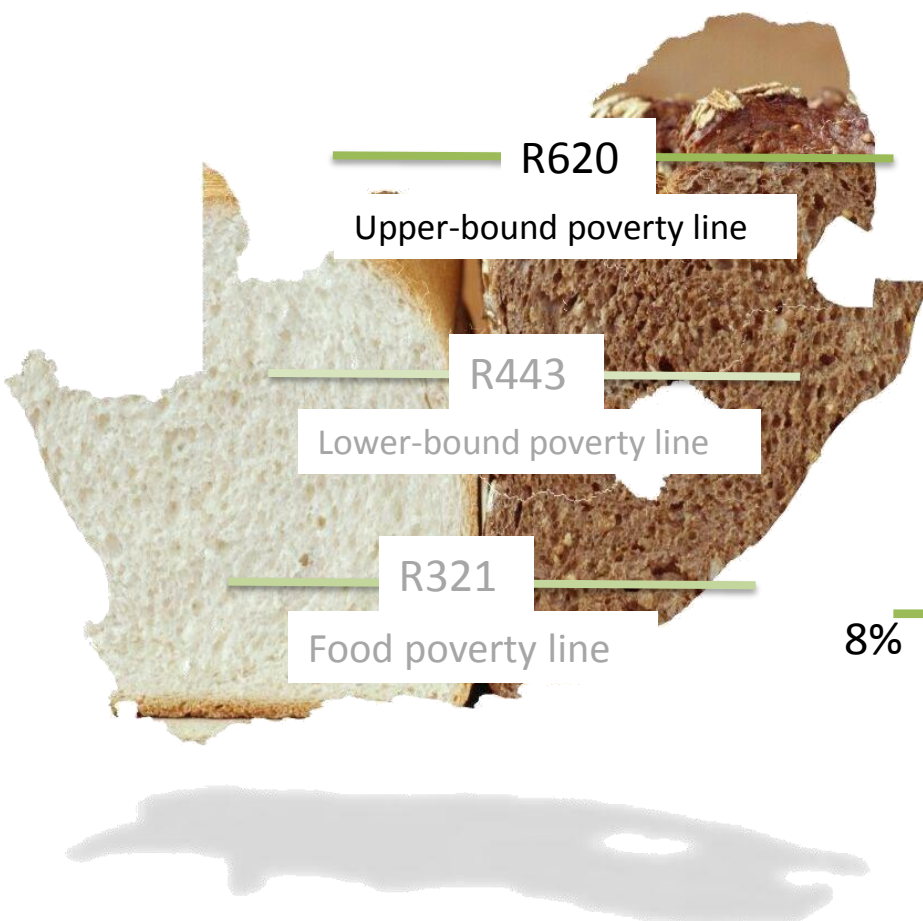

Spatio-Cultural and Temporal Dimensions of Measurement

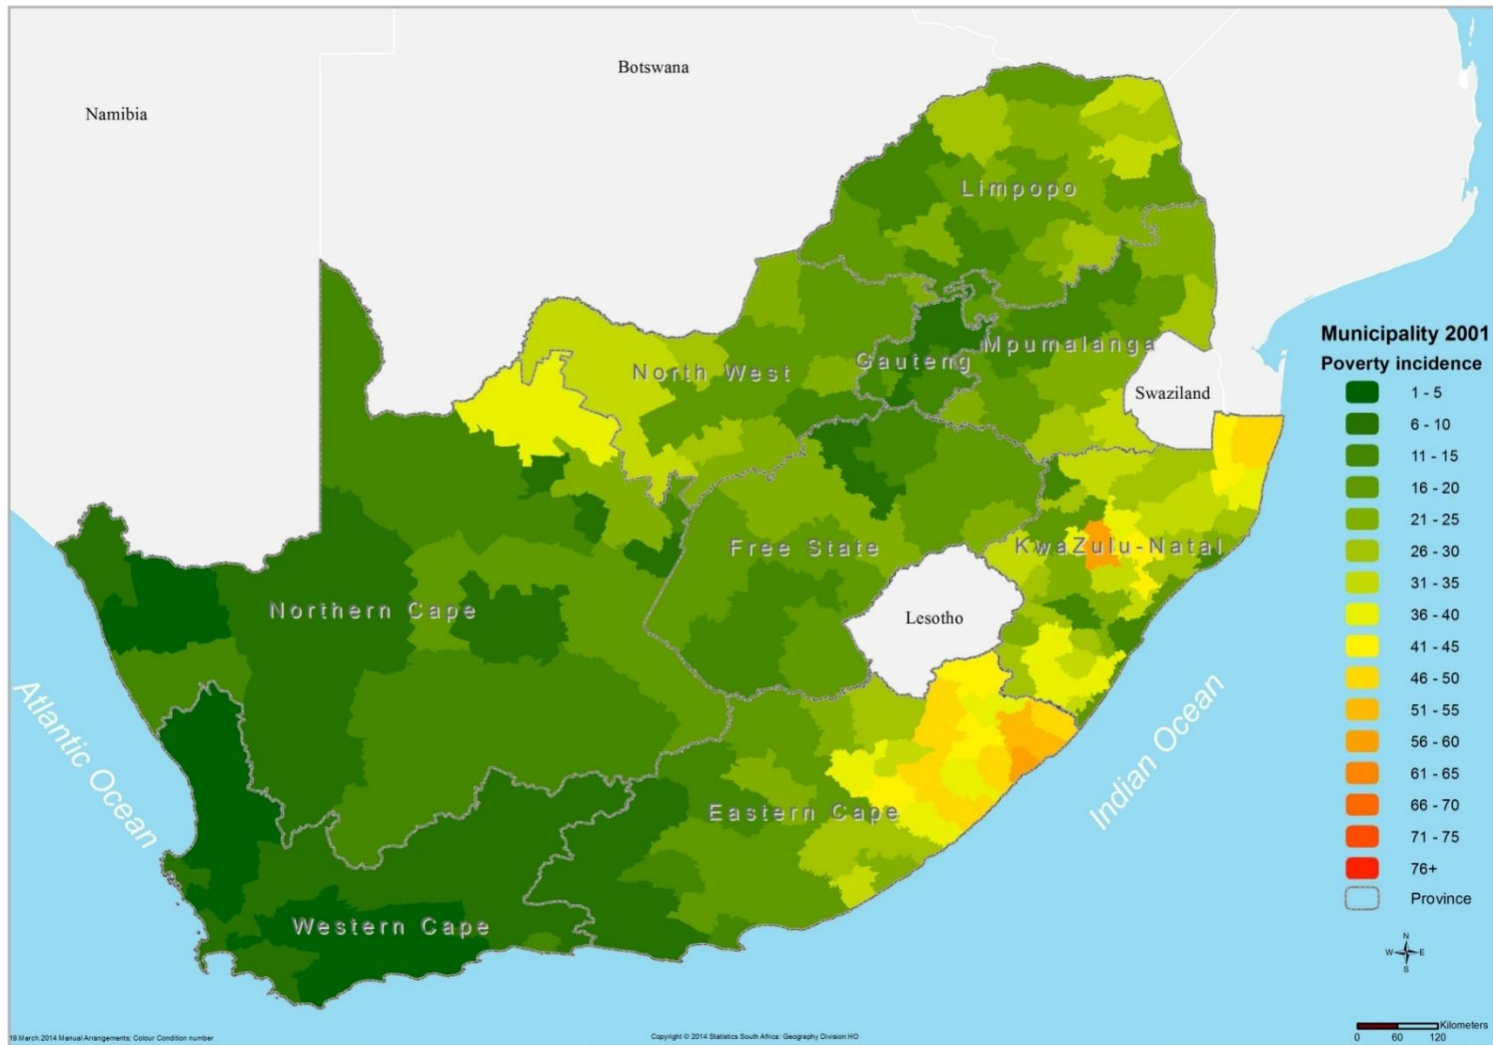

Use of Statistics to frame Inequality in South Africa

**Why Multidimensional Poverty Indices (MPI)
approach is good for South Africa**

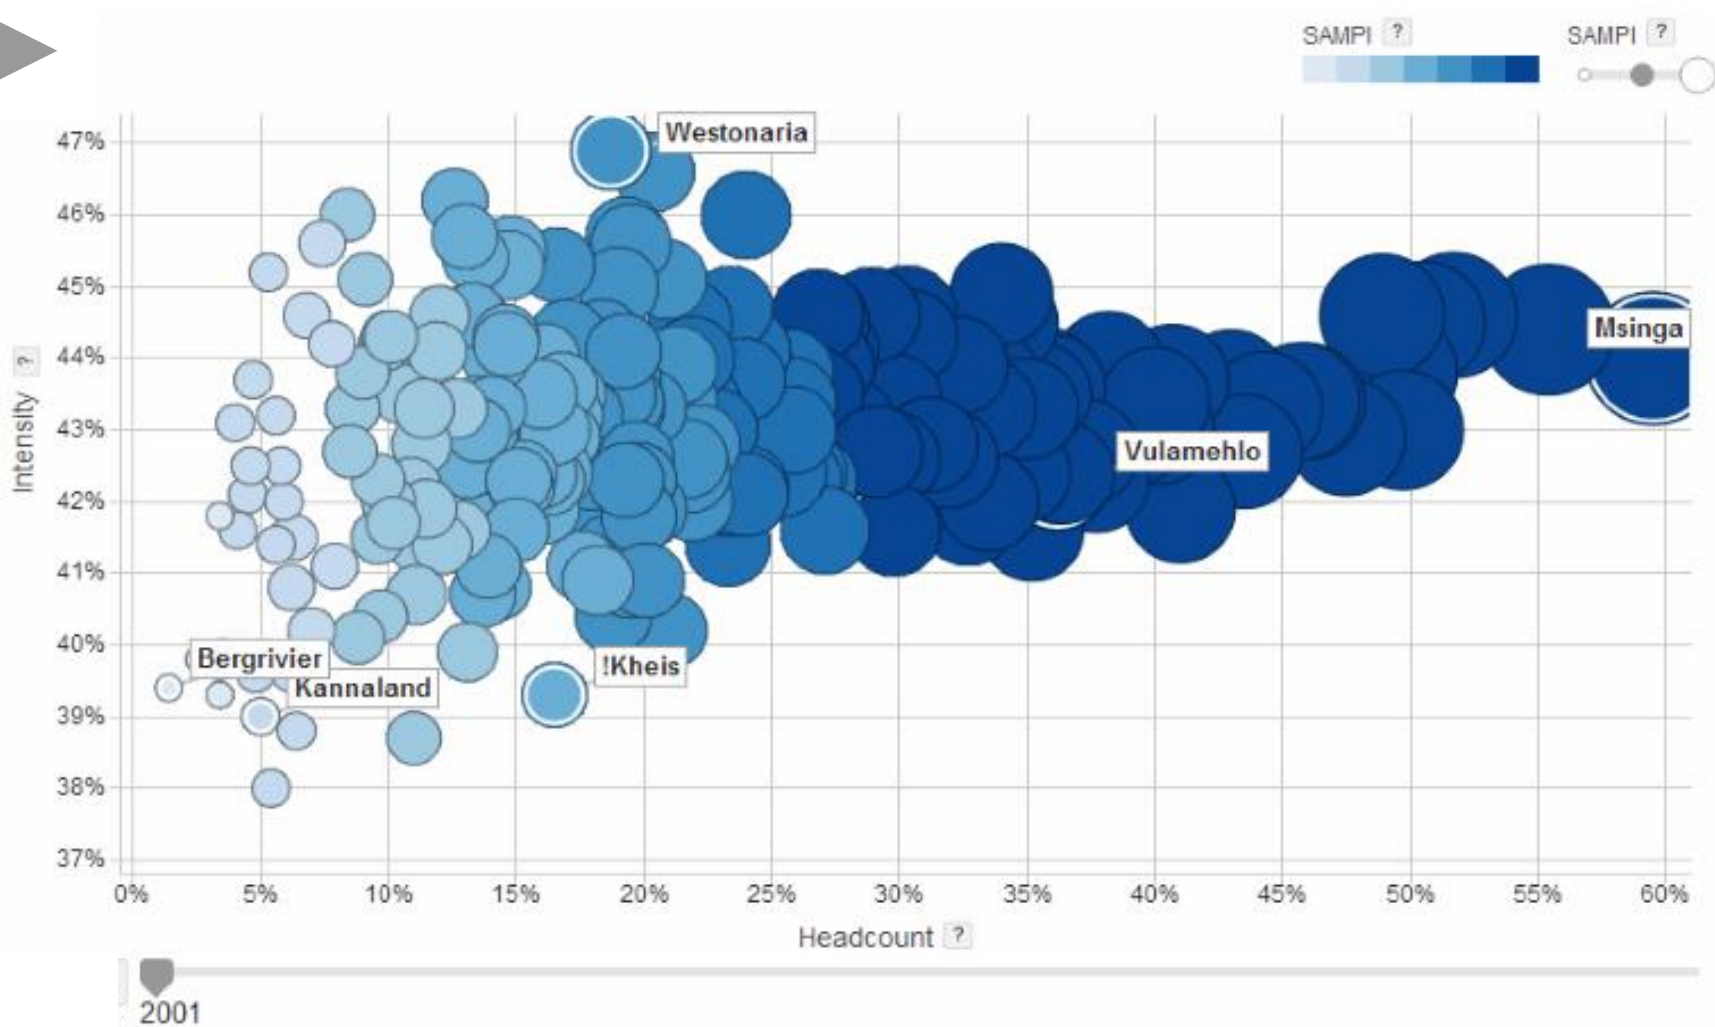

Measuring poverty

Mapping the poverty headcount by municipality – 2001-2011

Poverty headcount by municipality – 2001-2011 (SAMPI)

Poverty headcount by municipality – 2001-2011 (SAMPI)

Poverty headcount by municipality – 2001-2011 (SAMPI)

Poverty drivers in South Africa are multidimensional

■ 2011 ■ 2001

Unemployment is now the major driver of poverty in the country
